

NHS Devon Integrated Care Board Service Specification

Service Specification No.	
Service	Administration of Inclisiran in General Practice
Commissioner Lead	Nicola Jones, Deputy Director for Primary Care
Provider Lead	
Period	1 st October 2025 – 31 st March 2026 ((3 months' notice will be required to terminate this contract by either party))
Date of Review	

1. Population Needs

1.1 National/local context and evidence base

Following publication of [NICE TA733](#) for Inclisiran, arrangements for provision were approved nationally, that agreed, Inclisiran would be available for prescribing and administration in Primary Care.

Inclisiran is an option to support a reduction in cardiovascular risk factors and improved patient outcomes. It is the first of a new type of cholesterol-lowering treatment to boost the liver's ability to remove LDL-cholesterol from the blood. It is given by subcutaneous injection, either on its own or alongside statins or other cholesterol-lowering drugs. The recommended dose is 284 mg Inclisiran loading dose at 0 months and 3 months, then long-term maintenance every 6 months. Currently it is licensed for administration by a Healthcare Professional, not the patient. No additional monitoring is required.

The scope of this Local Enhanced Service supports the nationally strategic view to significantly reduce cardiovascular events and subsequent healthcare burden in those patients inadequately managed on first line treatments. This will potentially avoid referral to secondary care for alternative injectable treatments (PCSK9 inhibitors).

NHS England has agreed through DHSC with Community Pharmacy England that community pharmacies and general practices may purchase Inclisiran at a nominal charge of £45 (plus VAT) and be reimbursed at £60 (an increase from the £50 reimbursement), with the differential given to offset incurred costs. This update was planned for inclusion in the Drug Tariff from 1 April 2025. Should the national purchase/reimbursement arrangements change, the payment structure of this LES will be reviewed by the ICB.

This Local Enhanced Service Specification outlines the process and payment for parenteral administration of Inclisiran in General Practice.

2. Outcomes

2.1 NHS Outcomes Framework Domains & Indicators

Domain 1	<u>Preventing people from dying prematurely</u> Reducing deaths in babies and young children
----------	---

Domain 2	<u>Enhancing quality of life for people with long-term conditions</u> Health related quality of life for people with long term conditions		
----------	--	--	--

	<u>Ensuring people feel supported to manage their condition</u> <u>Improving functional ability in people with long term conditions</u>		
Domain 3	<u>Helping people to recover from episodes of ill-health or following injury</u> Emergency admissions for acute conditions that should not usually require hospital admission		
Domain 4	<u>Ensuring people have a positive experience of care</u> Patient experience of primary Care Patient experience of hospital care Friends and family Test <u>Improving children and young people's experience of healthcare</u> <u>Improving peoples experience of integrated care</u>		
Domain 5	<u>Treating and caring for people in safe environment and protecting them from avoidable harm</u> Patient safety Incidents reported Reducing the incidence of avoidable harm		

Local Defined Outcome:

1. The number of injections of Inclisiran administered per Practice where Inclisiran is a Devon Joint Formulary approved option in line with the NICE TA733 for treating primary hypercholesterolaemia or mixed dyslipidaemia.

3. Scope

3.1 Aims and objectives of service

To ensure patients in whom Inclisiran is the decided therapeutic option receive treatment in line with national and local guidelines.

Objectives:

1. GP practices are supported to initiate and continue on-going prescribing and administration of Inclisiran for patients, improving overall long-term morbidity risk.
2. Addressing inequalities by offering the commissioned service across the full Devon population.
3. Greater access for patients to pro-active management of Inclisiran in Primary
4. GPS are remunerated to provide this service.

3.2 Service description/care pathway

Inclisiran is included in both the North & East Devon and South & West Devon Formulary and Management of Blood Lipid Levels guidelines. GP Practices may initiate and continue prescribing.

Inclisiran has a blue Traffic Light Status (TLS) and is appropriate for prescribing throughout the ICS within the competencies of the prescriber.

It is licensed for administration by a Healthcare Professional, not the patient.

In line with NICE guidelines no additional monitoring is required

[North & East Devon Formulary and Referral guidance](#)

South & West Devon Formulary and Referral guidance

By agreeing to participate in this LES the practice will also be required to provide the following information:

- Assurance that a robust re-call system is in place to ensure recall of patients for the necessary administration.
- The practices current standard operating procedure for the above activities as part of the review of practice monitoring activity.
- Information about significant events, including root cause analyses, involving Inclisiran should be reported within 48 hours of the clinician being made aware of the incident and should be report via [NHS England » Learn from patient safety events \(LFPSE\) service](#). If practices haven't yet registered with LFPSE, they could contact the ICB for support dicb.qualityadmin@nhs.net
- **This is a black triangle drug, and all suspected reactions must be reported via the MHRA yellow card reporting site.** [Yellow Card | Making medicines and medical devices safer](#)

How Will Activity Data be Obtained?

Practices should claim via the Commissioning Intelligence LES portal.

3.3 Population covered

This service is for all patients registered with a participating practice, for whom it is clinically appropriate and prescribed in line with the Devon Formulary.

3.4 Any acceptance and exclusion criteria and thresholds

Inclisiran provided to a patient by another provider (unless that provider was sub-contracted by the GP practice) may not be considered for payment through this LES.

3.5 Interdependence with other services/providers

Per guidance in Devon Formulary and other guidance in place e.g. regarding the primary care - secondary care interface.

4. Applicable Service Standards

4.1 Applicable national standards (eg NICE)

NICE recommends Inclisiran as an option for treating primary hypercholesterolaemia (heterozygous familial and non-familial) or mixed dyslipidaemia as an adjunct to diet in adults only if there is a history of acute coronary syndrome (such as myocardial infarction or unstable angina needing hospitalization), coronary or other arterial revascularization procedures, coronary heart disease, ischaemic stroke, or peripheral arterial disease, and LDL cholesterol concentrations are persistently 2.6 mmol/L or more, despite maximum tolerated lipid-lowering treatment (that is, maximum tolerated statins with or without other lipid-lowering treatments or other lipid-lowering treatments when statins are not tolerated or are contraindicated).

The following guidance from NICE:

- Inclisiran for treating primary hypercholesterolaemia or mixed dyslipidaemia ([TA733](#)).
- Cardiovascular disease: risk assessment and reduction, including lipid modification | Guidance | NICE [NG238](#)
- NHS England [NHS England » Quality and Outcomes Framework guidance for 2025/26](#)

4.2 Applicable standards set out in Guidance and/or issued by a competent body (e.g. Royal Colleges)

- RCGP and BMA statement: [Information on the proposal for the prescription of inclisiran in primary care settings](#)

4.3 Applicable local standards

- North & East Devon and South & West Devon Management of Blood Lipid Levels
- Inclisiran Clinical Guidelines
 - [2. Cardiovascular - North & East](#)
 - [2. Cardiovascular - South & West](#)

5. Applicable quality requirements and CQUIN goals

5.1 Applicable Quality Requirements (See Schedule 4 Parts [A-D])

N/A

5.2 Applicable CQUIN goals (See Schedule 4 Part [E])

N/A

6. Location of Provider Premises

The provider will provide this service from any location as included in the practice's GMS, PMS or APMS contract where these facilities enable the provider to ensure privacy and dignity and appropriate infection control.

7. Funding for 2025-2026

The total item of service remuneration per injection will be maintained at £13.87, not inclusive of annual uplifts. This will initially consist of £3.87 from the LES with a commitment to uplift this as required to meet both annual uplifts (see below) and any changes in the national purchase/reimbursement arrangements.

National Funding Arrangement

NHS England has agreed through DHSC with Community Pharmacy England that community pharmacies and general practices may purchase Inclisiran at a nominal charge of £45 (plus VAT) and be reimbursed at £60 plus VAT (an increase from the £50 reimbursement), with the differential given to offset incurred costs. This update was planned for inclusion in the Drug Tariff from 1 April 2025. NHS E Guidance on Drug Tarriff as below:

“Inclisiran is available in general practice as a personally administered item reimbursed via an FP10 prescription and it is listed in the Drug Tariff (Part VIIC) at a reimbursed amount from 1 April 2025 of £60 per injection)”

Should there be a problematic delay in the national reimbursement (currently £10) the ICB and a participating Practice may arrange more timely payment from the ICB with a subsequent clawback when the national portion of the funding is reimbursed.

DDRB will be used as the start point for annual ‘inflationary’ review, with any deviation from DDRB uplift requiring clear rationale.
